Continuation of Attachment(s) 3. Information Disclosure Statements (PTO/SB/08), Paper No./Mail Date: 3/11/2011 & 3/28/2011.

Information Disclosure Statement

1. Regarding the IDS filed on March 11, 2011, the quality of the copy of the NPL document submitted by applicant does not appear to be improved from the copy submitted on October 8, 2010. The examiner asserts that it is still extremely difficult to read, with parts being illegible. Though the citation on the IDS has been initialed, the examiner has only considered the legible parts of the reference. At least the figures and the text within the figures on pages 97, 98, 99, 293, 294, 295, and 300, have not been considered. Also, the sample code on pages 101 and 300 have not been considered.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given by Bryan A. Santarelli, Reg. No. 37,560, on April 21, 2011.

The application has been amended as follows:

- In claim 62:
 - In line 3, insert --coupled between a processor and a pipeline accelerator-- between "bus" and the semicolon.

- In line 4, replace "a processor coupled to the buffer and to the bus and operable" with --wherein the processor is coupled to the buffer and is operable--.
- At the beginning of the last paragraph of the claim, replace "a pipeline accelerator coupled to the bus, including the destination, and operable" with --wherein the pipeline accelerator includes the destination and is operable--.

REASONS FOR ALLOWANCE

3. The following is an examiner's statement of reasons for allowance:

Regarding claim 19, the prior art of record has not taught, either individually or in combination, and together with all other claimed features, the claimed objects and publishing, as limited by applicant, and a pipeline accelerator coupled to the bus, including the destination, and operable to receive the message from the bus, to recover the received published data from the message, to provide the recovered data to the destination, and to process the recovered data at the destination without executing a program instruction.

Regarding claim 22, the prior art of record has not taught, either individually or in combination, and together with all other claimed features, the claimed objects, as limited by applicant, and a pipeline accelerator coupled to the bus and operable to generate data without executing a program instruction, to generate a header including information indicating a destination of the data, to package the data and header into a message, and to drive the message onto the bus.

Regarding claim 51, the prior art of record has not taught, either individually or in combination, and together with all other claimed features, the claimed objects and publishing, as limited by applicant, and processing the published data with the indicated hardwired pipeline without executing a program instruction, the indicated hardwired pipeline being part of a pipeline accelerator that includes a field-programmable gate array.

Regarding claim 53, the prior art of record has not taught, either individually or in combination, and together with all other claimed features, the claimed objects, as limited by applicant, and generating, with a pipeline accelerator and without executing a program instruction, a message header that includes a destination of data, the destination identifying a software application for processing the data.

Regarding claim 62, the prior art of record has not taught, either individually or in combination, and together with all other claimed features, the claimed objects and publishing, as limited by applicant, and a pipeline accelerator coupled to the bus, including the destination, and operable to receive the message from the bus, to recover the received published data from the message, to provide the recovered data to the destination, and to process the recovered data at the destination without executing a program instruction. Note further that the machine in claim 62 is limited to including a single, i.e., only one, bus between the processor and pipeline accelerator. Claim 62 is, therefore, of different scope than claim 19, which is broader in the sense that multiple buses may exist between the processor and pipeline accelerator.

Finally, applicant made the following clarification in the after-final amendment submitted on March 28, 2011:

"In response to the examiner's statement in the advisory action, the applicants' attorney clarifies that he is not disclaiming his statements regarding the limitations 'publish' and 'object,' but is indicating only that he does not necessarily agree with the examiner's statements regarding 'publish' and 'object,' at

least to the extent that the examiner's statements may differ, or may be interpreted differently, from the applicants' attorney's statements."

In response, the examiner asserts that "publish", and variations thereof, are to be limited as set forth by applicant in the last two paragraphs on page 28 of the response filed by applicant on October 8, 2010. Similarly, "object", and variations thereof, are to be limited as set forth by applicant in the last three paragraphs on page 27 of the same response. The examiner summarized these limitations in paragraphs 65-66 of the final rejection mailed on December 27, 2010. The examiner's statements are consistent with applicant's and include nothing that isn't common knowledge in the art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
